Administration of Anesthesia Adult Inpatient

Anesthesia is planned for the following procedure:

Date and Time:

Date and Time:

Facility or practice where procedure will take place:

Physician/Caregiver performing procedure:

Contact Number:

Dear Patient:

Tests and treatments that may be painful are often performed under anesthesia. Several types of anesthesia are available. These types can be used alone or combined with each other to meet your needs.

This document provides general information about the types of anesthesia and how they are carried out. It also gives information about the potential benefits and possible risks of anesthesia, anesthesia alternatives and what might happen if you choose to refuse the anesthesia. This information will help you make an informed decision and prepare you to talk with your anesthesiologist about the anesthesia. You will have an opportunity to ask questions and discuss the specifics of your case with your anesthesiologist.

In order for your anesthesiologist to provide information about the risks and benefits in your specific case, it is
